AMERICAN ASSOCIATION OF ENGINEERING SOCIETIES

The American Association of Engineering Societies (AAES) is a multidisciplinary organization dedicated to advancing the knowledge, understanding and practice of engineering in the public interest. Its members represent the mainstream of U.S. engineering—over half a million engineers in industry, government, and education.

Through its councils, commissions and committees, AAES addresses questions relating to the engineering profession; assesses public policy issues affecting engineering, technological innovation and national goals; conducts surveys of engineering personnel; represents the U.S. engineering community internationally in such bodies as the World Federation of Engineering Organizations and the Pan American Union of Engineering Associations; undertakes special projects such as national inventors' workshops and major studies of the utilization of American engineers; issues statistical studies of the engineering workforce, present and future; and publishes reference works such as *Who's Who in Engineering* and the *Thesaurus of Engineering and Scientific Terms*.

AAES also conducts forums for leaders in engineering, industry, government and education for the discussion of issues affecting engineering and the public interest. These include annual leadership conferences, workshops on technology forecasting and assessment, public policy roundtables, and engineering executive forums.

ENGINEERING MANPOWER COMMISSION

The Engineering Manpower Commission (EMC) has been a source of objective, timely data on questions relating to the supply and demand for technological personnel since its organization in 1950. As an AAES Commission, EMC is composed of volunteers from professional engineering societies, academia, government, and industry, supported by a professional staff headed by AAES' Director of Manpower Studies.

EMC conducts annual surveys of industry and schools of engineering, monitors trends in the supply of and demand for engineers, and produces annual reports on engineering enrollments, degrees, and salaries. In addition to its statistical studies, EMC also produces the *Engineering Manpower Bulletin*, which assesses trends in the engineering workforce including participation in the profession by women and ethnic minorities.

ACKNOWLEDGEMENTS

The Engineering Manpower Commission wishes to express its grateful appreciation for the cooperation of the hundreds of deans and other college officials who provided the data on which this report is based.

INTRODUCTION TO VOLUME I

This is the 18th in a series of annual reports from the Engineering Manpower Commission (EMC) on enrollment in engineering and engineering technology programs in the United States. Volume I of the study covers engineering; Volume II covers engineering technology. All data are for enrollment as of Fall of 1985.

The remainder of this introduction deals only with the data on engineering programs presented in Volume I. A separate introduction to Volume II provides information on the statistics for engineering technology.

The Volume I report provides detailed summaries of engineering enrollment for all students and for women, Blacks, Hispanics, American Indians, Asians and Pacific Islanders, and foreign nationals. Enrollment is tabulated by the year in school—first, second, etc.—for full-time undergraduates, and by the type of degree sought—masters, professional engineering, or doctorate—for those in full-time graduate programs. Part-time students are tabulated separately at the undergraduate and graduate levels, irrespective of their year in school or of the type of degree they seek.

EMC's enrollment reports provide two basic types of tabulations, as well as selected summary tables. The first series of tabulations deals with overall enrollment, across all curricula, for each school of engineering covered in this survey. Schools are listed alphabetically by state. These data provide basic institutional and geographic measures of participation in engineering programs.

The second series of tabulations provides detailed statistics on enrollment for each major engineering discipline (civil, chemical, electrical, etc.). Within each of these broad groups, specific program titles that are assigned by schools to their programs are also tabulated. For example, readers wishing to learn about enrollment in manufacturing engineering can check for curricula of that kind within the listings for the more general category of industrial engineering programs. The tabulations by type of engineering program retain details about the curricula of specific schools. Summary tables provide more compact accounting for total enrollment, across all schools, in each of the major engineering disciplines.

COVERAGE AND RESPONSE

The statistics in this volume reflect enrollment at 297 institutions of engineering in the United States and its territories. These schools include all of the 264 colleges and universities that had at least one engineering curriculum approved for the 1985-86 academic year by the

Accreditation Board for Engineering and Technology (ABET). They also include virtually all other schools in the U.S. that award degrees in engineering at the bachelors level (or higher). A few relatively new programs (such as the one at FSU/FA&M in Tallahassee, Florida) have not been included in this year's enrollment report; these will be added to the enrollment survey in 1986.

Most of these institutions are traditional four-year (or more) colleges and universities, but other kinds of institutions are present, including schools that offer only graduate engineering programs and schools that serve only part-time students. A few of the survey participants are "feeder" schools in 3-2 (or similar) curricula, in which students who complete a local pre-engineering program may complete their undergraduate training at one of the regular schools of engineering. EMC has never attempted to provide comprehensive coverage of pre-engineering enrollments in the nation's community and junior colleges, but this could change in future surveys.

Of the 297 schools of engineering covered in this report, 266 actually responded to EMC's survey of 1985 enrollment. Enrollment at the remaining schools was estimated by utilizing 1984 responses, which were available for all 31 nonparticipating institutions. Substitution of previous-year responses for missing data is standard practice in EMC's surveys of engineering enrollment and degrees. Substitutions are never allowed to go beyond the previous year; in past surveys, a few schools have dropped out of the surveys for two or more years in a row, forcing EMC to leave them out of the data altogether, but this problem did not occur in 1985 (there is a single curriculum for a masters-level computer science program that has not been reported since 1983, but this seems trivial; the school in question did respond to the 1985 survey of enrollment for its undergraduate engineering and engineering technology programs).

In judging responses to these surveys, it should be noted that perfect participation is probably an unreasonable goal. Schools experience turnover in administrative positions, reorganizations, and other disruptions that can make it very burdensome if not impossible to respond. The level of cooperation with EMC's surveys of engineering education is very good: response rates for each new round of questionnaires are close to 90 percent.

All substituted data in the tabulations are flagged with asterisks ("**"). In a few rare cases, substituted data may not match earlier published EMC figures, because of the use of corrections submitted too late for previous reports. A list of the 31 schools treated with substituted 1984 enrollment responses is provided in Exhibit 1.

Exhibit 1

SUBSTITUTIONS: 1984 DATA USED IN PLACE OF MISSING 1985 RESPONSES

DATA ON UNDERGRADUATES (schools do not have graduate programs)

Bridgeport Engineering Institute (Connecticut)
Grove City College (Pennsylvania)
LeTourneau College (Texas)
Massachusetts Maritime Academy
Milliken University (Illinois)
New England College (New Hampshire)
Pacific Lutheran College (Washington)
Philadelphia College of Textiles (Pennsylvania)
Pratt Institute (New York)
Providence College (Rhode Island; 3-2 feeder school only)
SUNY Maritime College (New York)
Temple University (Pennsylvania)
University of Wisconsin at Platteville
Valpariso University (Indiana)

BOTH UNDERGRADUATE AND GRADUATE DATA:

California State University at Sacramento
City College of New York (CCNY/CUNY)
Humboldt State University (California)
Louisiana Tech University
South Dakota School of Mines and Technology
South Dakota State University
SUNY A&T College at Alfred (New York; formerly the SUNY College of Ceramics)
SUNY College of Environmental Science & Forestry (New York)
University of Bridgeport (Connecticut)
University of Dayton (Ohio)
University of Georgia
University of Miami (Florida)
University of Tennessee at Chattanooga
University of Texas, Permian Basin Campus
University of Toledo (Ohio)
Yale University (Connecticut)

GRADUATE DATA ONLY (these schools did respond in 1985 for their undergraduates):

California State University at Long Beach
University of Evansville (Indiana)
University of Minnesota

GRADUATE DATA ONLY (school does not have undergraduate programs):

Hartford Graduate Center (Connecticut)

Note: In addition, no response was obtained for enrollment in a single masters-level program in computer science at the New York Institute of Technology, and no substitution was possible. This school did provide 1985 data for its undergraduate engineering and engineering technology programs.

ERROR CHECKING

The data presented in this report are subjected to intensive error checking, including line-by-line comparisons with prior-year data and checksum comparisons on data entry. Apparently dramatic shifts in the data from one year to the next often prove to be indicators of data entry errors or of changes in reporting criteria at the level of particular institutions. Error checking has caught and removed many problems of the former type. Other sharp movements between the results of 1984 and 1985 for particular engineering schools can be attributed to a variety of causes:

- In a few cases, schools that usually report full-time and part-time enrollment separately were unable to make this distinction in 1985. Changes in the opposite direction also occurred: some schools that had not provided separate part-time enrollment figures in 1984 did do so in 1985. In all, nearly 30 schools displayed one or the other variety of this sort of inconsistency between 1984 and 1985 responses, which often can be traced to turnover in the personnel assigned to fill out the survey forms. EMC hopes to help the participants in its educational surveys to deal with this type of difficulty, by providing printouts with each new survey that indicate what a school's previous response was like. Across the survey as a whole, the two types of variations in reporting practice cancelled each other out: about as many part-time students were added as were removed from the data.
- Another variety of year-to-year inconsistency in the responses filed by schools takes the form of decisions to report or not report enrollment in programs that fall on the borderlines between engineering and other disciplines. Computer science programs are one example. Other applied science curricula are another. Often variations of this kind are associated with personnel changes at the reporting institutions, as with the part-time reporting inconsistencies noted above. In other cases, however, revised judgments about what to report are the result of formal academic reorganizations, revisions in program offerings, or other developments within the profession. In general, EMC does not attempt to second-guess these judgments, although in truly ambiguous cases we will argue for consistency in reporting if no other rule of thumb seems to prevail.
- Changes across years are not necessarily attributable to current errors. Enrollment at Syracuse University seems to have risen sharply—until one realizes that 1983 data was substituted for the school in 1984. Adding to the exaggeration, the 1983 report was evidently incomplete. The opposite effect applies to the data for Southern Illinois at Edwardsville: an apparent drop in enrollment is actually a result of errors in the school's 1984 report, when too many students were listed.

- Often sharp shifts in enrollment statistics turn out to be authentic. For example, Penn State's first-year engineering enrollment alone rose from 1,811 in 1984 to 2,743 in 1985. Engineering enrollment at the Maine Maritime Academy has dropped sharply as the school increases its emphasis on engineering technology programs. Wichita State experienced unusually large enrollments in 1984; its more normal 1985 statistics could be characterized as "a return to usual conditions" instead of labeling them as a "drop." All of these situations, and many others, have been verified by telephone contacts with the responding institutions.

ESTIMATING MISSING DATA

There are some cases of partial responses. Four of the 266 responding institutions had graduate programs, but did not provide information on enrollment at that level; 1984 data for those programs only was substituted in three of these cases. (Accordingly, the list of substitutions in Exhibit 1 includes 34 schools, not just the 31 that did not respond in 1985 at all.) In the fourth case, no substitution was possible, but the omission does not seem to be very significant (the missing students are enrolled in the M.S. computer science program noted earlier).

A more common type of partial response is missing data for one or more of the several special population groups of interest to the engineering profession—women, ethnic minorities, and foreign nationals. In some cases, engineering schools were able to provide accurate overall counts of such students, but could not indicate the numbers of these persons enrolled in specific curricula. In other cases, totals for women, Black students, etc., were available for all undergraduates but were not broken down into the numbers enrolled at the first-year, second-year, or later level. Whenever accurate overall counts of the special population groups were available but these kinds of details were not, EMC allocated the totals to more detailed program-specific levels, prorating the totals according to the distribution of all students among the different programs and/or class levels at a particular school.

In other cases, not even partial data were available for the special population groups. EMC urges all participating schools of engineering to provide the requested details on these groups, but in some cases such data are simply not maintained, or are maintained only for a part of the total enrollment (for example, a school may keep ethnicity statistics for undergraduates but not for graduate students). In 1985, 37 schools had some form of missing data of this type (see Exhibit 2 for a list, specifying the exact nature of the missing information in each case). In some of these cases, missing information was limited to a single one of the six groups; in one case, it was limited to students in a single curriculum. Six schools failed to provide any data whatever on the special population groups, supplying only information on overall enrollment.

*Substituted (1984) data												

*Substituted (1984) data.

Note: Group estimates also provide for missing data on all six groups for chemical engineering undergraduates ONLY at the University of California at Berkeley. The school is not listed in the body of this table because complete data was provided for all other programs.

In these cases, EMC forms a single aggregated estimate, for the survey as a whole, of the probable numbers of women, members of ethnic minorities, and foreign nationals which the Commission believes to be actually enrolled in engineering but which have not been otherwise reported by their schools. The estimate is a conservative one and draws on older degree and enrollment reports. No figures are inserted into the data for the schools themselves. Instead, the missing data estimates are aggregated into a single data set, which is then allocated among the various engineering disciplines, pro-rating the aggregated estimates according to the overall distribution of enrollment by fields. The resulting statistics are reported in tabulations under the heading of "Missing Data—Group Estimates." In this manner, EMC attempts to make small improvements in the accuracy of overall estimates of the participation in engineering education by the members of the six population groups.

These estimates have no effect on counts of overall enrollment.

Readers should note that in past EMC reports, all schools have been retained in tabulations of enrollment for women, Black students, etc., even when there was no data to report. This provided explicit "no such enrollment reported" signals in the tables, but it also caused the reports to be filled with large numbers of empty cells in which no data appeared, particularly for the smaller population classes. In 1984 and again in 1985, EMC decided to suppress these "no data" lines from the tabulations; this permits significant savings in the reproduction costs of the reports, and does not detract from the informational content of the tables as long as readers make use of the listing of missing data in Exhibit 2. If a particular school of interest does not appear to have students of some specific type, for example, Hispanics, it will be wise to doublecheck the listing in the exhibit, to see if the school was one of those with missing data for the group in question. If so, then it should be assumed that the institution does have some students in the population group, even though the report does not indicate their numbers.

Exhibit 3

EXPLANATION OF SYMBOLS AND ABBREVIATIONS

Program-level ABET Accreditation Codes: In the curriculum tables provided in this report, each program is tagged as to its status with The Accreditation Board for Engineering and technology (ABET). The codes are:

- B = ABET-accredited, at bachelor degree level
- M = ABET-accredited, at masters' level (such accreditations are being phased out.)
- A = ABET-accredited, at associate degree level (used only in technology tables.)
- N = Not ABET-accredited.

School-level Accreditation and Control (AC) Codes: These appear after each school's name. The first digit is an accreditation code with the following meaning:

- 1 = At least one engineering curriculum accredited by ABET (1985 list, which was applicable for these programs at the time of the survey.) Used only in the engineering degree tables.
- 2 = At least one technology curriculum accredited by ABET (1985 list). Used only in the technology degree tables.
- 4 = Accredited by a regional accrediting commission.
- 5 = Accredited by NATTS.
- 6 = None of the above.

The second digit indicates control of the school according to the following code:

- 1 = Public—state or local government control
- 2 = Public—federal government control
- 3 = Private—non-profit, non-sectarian
- 4 = Private—religious
- 5 = Private—proprietary

An asterisk (*) appearing next to the "AC" Code indicates that 1984 data has been used as the best estimate for 1985, as indicated above in the discussion of substitutions and estimates.

Engineering Degree Categories:

The following abbreviations are used in the tables:

AER	Aerospace & related
AGR	Agricultural
ARC	Architectural
BIO	Bioengineering
CER	Ceramic
CHE	Chemical
CMP	Computer
CVL	Civil, Construction
ELC	Electrical, Electronic
ENS	Engineering & Applied Science
ENV	Environmental
GNL	General
INM	Industrial, Manufacturing, Engineering Management
MAR	Marine
MEC	Mechanical
MGN	Mining, Mineral, Geological
MTL	Materials & Metallurgical
NUC	Nuclear
PET	Petroleum & Natural Gas
OTH	Other
SYS	Systems

Engineering Technology Degree Categories:

A different set of abbreviations is used:

ACN	Air Conditioning, Heating, Refrigeration
AER	Aeronautical, Astronautical
ARC	Architectural
AUT	Automotive
CHE	Chemical
CVL	Civil, Highway, Surveying
CON	Construction
CMP	Computer
DRF	Drafting, Design
ELC	Electrical
ELM	Electromechanical
ELX	Electronic
ENS	Engineering Science
GNL	General
INM	Industrial & Manufacturing
MAR	Marine
MEC	Mechanical
MGN	Mining, Metallurgical, Welding
MTL	Materials
NUC	Nuclear
OTH	Other, e.g., 2-Yr or Pre-Engineering, Agricultural, Bioengineering, Environmental

OTHER NOTES

A listing of the symbols and abbreviations used in this report is provided in Exhibit 3. A tabulation of historical data from EMC's surveys of opening Fall engineering technology enrollments between 1975 and 1985 is provided as Exhibit 4. For reasons outlined above, these data should NOT be regarded as comprehensive or precisely comparable from one year to the next.

Nomenclature for program titles in the curricula tabulations adheres closely to the actual terms used by the responding schools. Common abbreviations and other titling conventions have been imposed, however. In gen-

eral, EMC attempts to provide a degree of consistency in the labels used for programs, to facilitate identification of similar curricula, without eliminating distinctions that are important to engineering educators. Queries regarding the course content or other particulars of specific engineering technology programs should be directed to the responding institutions and not to EMC.

For the convenience of users, the two volumes of *Engineering and Technology Enrollments—Fall 1985* are available separately or as a set. Please address your orders to the AAES Publications Department, 415 Second Street, N.E., Washington, D.C. 20002.
